Office Action Summary

## **DETAILED ACTION**

### ***Drawings***

1. The drawings are objected to because the boxes in the figures should be labeled. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### ***Claim Objections***

2. Claims 6-8, 13 and 14 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim should refer to other claims in the alternative only, and/or, cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.
3. Claim 10 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Claim 10 fails to set forth any method steps.

### ***Claim Rejections - 35 USC § 112***

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Art Unit: 3737

5. Claims 1-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In claim 1 line 2, "a polarization analyzer element or analyzer" is indefinite in that it is unclear which is being claimed. In claim 5, it is unclear what is meant by "substantially the same as the solar spectrum."

***Claim Rejections - 35 USC § 102***

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

7. Claims 1-5 and 9-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Shiratori et al.

Shiratori et al. teaches an analyzer for examining a surface (23) comprising: a source of polarized light (21, 22), a polarization filter (25), means for taking digital images (24) and a processing unit (20) capable of calculating the brightness and intensity of a plurality of points on the surface from pixels in the digital images (col. 7 line 66 – col. 8 line 6 and col. 8 lines 25-35). Shiratori et al. further teaches wherein the light source may employ visible monochromatic light or white light (col. 8 lines 7-10).
